

Carbon projects deserve more than a last-minute tick and flick. With **Forsyths**, you'll have auditors who understand the land, your goals, and the importance of doing things right the first time.

If you've already started, it's not too late, we can work with you from whatever point you are at.

## GREENLIGHT

### What About Cost?

The total cost of **GreenLight** is similar to a traditional "end-only" audit, however the difference speaks for itself. With **GreenLight**, payments are spread over the life of the project, so you avoid surprises and stress at the end.

*You'll gain years of confidence and support throughout your journey.*

# Auditors in boots, not suits.

## GREENLIGHT

Supporting carbon  
projects from day one

Most people think of auditors as the ones who turn up at the end of your project with a lot of questions and a bill to match. With **Forsyths**, we're different. We walk alongside you through the life of your carbon project *providing confidence, clarity, and compliance every step of the way*.

#### The GreenLight difference

**Peace of Mind:** Issues are spotted early, not after years of hard work.  
**Proactive, Not Reactive:** Fix challenges before they block your ACCUs.

**True Partnership:** We work with you, not against you.

**Specialist auditors:** we are specialist auditors who deeply understand a risk based audit approach meaning no wasted time, no irrelevant focus, and a smoother process.

## Why GreenLight makes sense.

01

### Audit at key milestones

We don't wait until the end. We check compliance throughout.

02

### Convenient site visits

Have a site visit when it suits you, not when the clock is ticking.

03

### Faster Final Audit

Finish your audit within weeks, not months.

04

### There when needed

Our audit team is available for questions anytime, and you'll receive periodic updates on issues impacting your project.

#### We will conduct audit procedures at key milestones throughout your project:

**Project registration & eligibility:** Including testing of baseline documentation, land management strategy and checks of relevant eligibility criteria such as land holders consent.

**Mapping:** Including validating Carbon Estimation Areas, exclusion areas etc.

**Baseline and subsequent sampling:** Including sampling plan and soil testing carried out in accordance with the methodology.

**Ongoing eligible activities:** Including sighting evidence that land management practices have been carried out as specified in the land management strategy throughout the project period.

This would mean we will have already conducted a significant component of our audit procedures, meaning we can work with you to achieve an audit turn around in weeks not months.

#### Let's get it right, together.

Contact the Forsyths team today to ensure your project is backed by local expertise and professional integrity.
